

# Which Router Solution do I need?

If you have a sizable Control system installation including some of these brands - AMX, Control4, Crestron, Elan Home Systems, Savant and want the most reliable network backbone – **RSB-KIT**

I have a small to medium size system, but looking for performance and reliability and one network subnet is enough – **RB-KIT**

I have very, very strong IT skills/knowledge and I'm very comfortable with enterprise-class products including command line and don't rely on Pakedge support – **RT-50F**

	<b>RT-50F</b>	<b>RB-KIT</b>	<b>RSB KIT</b>
