

Pakedge Device & Software Inc. Officially Launches as a Manufacturer of Premium Residential Wireless and Networking Products

San Mateo, California- December 13, 2003. Pakedge® Device & Software Inc. launched today as a manufacturer of high performance wireless and computer networking devices for the custom residential market. Their products are sold exclusively through authorized custom electronics retailers, home automation and computer network installers. The company has offices in San Mateo and Huntington Beach, California.

“Today, more and more computer networks are installed in homes and more and more families are relying on them as mission critical,” says Victor Pak, Founder and President. “The computer network has moved well beyond the home office or a single room. Families want to use network enabled devices such as laptops, printers, home control remotes and appliances wherever they are in their home. They also want the quality of service to be very high, and most importantly, they don’t want the backbone of the network to be a part of their home decor.”

Pakedge® Device & Software is developing a family of network devices exclusively designed for homes with never-before-seen performance and reliability in the residential market. “Our products use the best components and semiconductors available in the market today,” says Founder and Executive Vice President, Michael Kwak. “Installers can rely on our product always having the same high quality and reliable chipsets.” adds Mr. Kwak. “Custom installers like predictable and stable products for their customers. That’s what we provide.”

Pakedge Device & Software’s immediate product goal is to provide their exclusive network of retailers and installers with a complete line of premium home networking products that enable the next generation of both wired and wireless networks.
