**Pakedge Debuts Its PI-04
Offering Unique Features for Custom-Installation A/V and Home Networking**

Foster City, CA – [Pakedge Device & Software](#) today announced the introduction of its **PI-04 PoE Power Injector**, offering features and flexibility not found in other PoE injectors.

The Pakedge PI-04 is an advanced Gigabit IEEE 802.3af compliant PoE Power injector with Endspan Intelligent Detection. It delivers unprecedented technology, is compact, and is enclosed in a heat dissipating metal housing with integrated wall mount flanges.

The Gigabit PoE technology is an innovative solution that eliminates finding a nearby electrical outlet to power network devices such as IP camera, wireless access points, and VoIP telephones. In addition, Ethernet will be carried at Gigabit speeds.

By virtue of not turning on power until it detects a valid PoE signature from the devices attached downstream on the Ethernet cable, it protects against damage to non-compliant equipment. In addition, voltage is inserted at 48V into the Ethernet cable, so the installer does not need to worry about voltage drops due to cable length. The PI-04 is not a Pakedge proprietary unit. It will power any device fully compliant with the IEEE 802.3af PoE Standard.

COMPANY PROFILE:

Pakedge Device & Software creates innovative networking products for people who demand performance, features, and reliability. Our products use the most advanced wireless and networking technology. They are designed for professionals to install and consumers to enjoy. For more information and system specifications, visit www.pakedge.com.
