

## Managed PoE Switch Promo

**Pakedge is running a promotion on Managed PoE Switches?! Yes, it's true. We are very excited about our new line of PoE switches, and we can't wait for our dealers to experience the power and versatility of these robust devices. What's so special about these switches is their sheer power: unlike other PoE switches on the market, Pakedge switches deliver 15.4 Watts through every single port, which means you can power up to 24 WAPs, touch panels, or IP cameras on one single switch! Another cool feature is that these switches can be remotely controlled by control systems such as Crestron, AMX, and Savant, to name a few. Simply hit a button on your touch panel to power-cycle an unresponsive IP camera or turn off a PoE LED light. Of course, just like all other Pakedge switches, they operate silently and have clean front faces with cables in the back. No other PoE switch can deliver this functionality at such a great price! Whether you require 8, 16, or 24 PoE ports, Gigabit or non-Gigabit, we have a solution that will meet the needs of your next installation.**

**Kindest Regards,**

**Victor Pak**
